

## Service Bulletin

Reference Number	NBP-0001
Date	4/5/2018
Product	Vacuum Pump
Affected Models	NPR6Di & NPR8Di

As part of the design in the NAVAC Intelligent Pump, it was intended to notify the operator when the evacuation process is complete. The pump will alert the operator 30 minutes after reaching 500 microns that the evacuation is complete and run at a reduced speed.

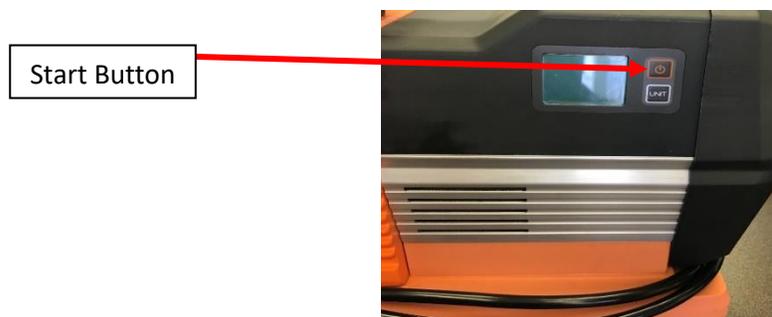

**Issue:** In certain applications, in particular to long evacuation periods or situations requiring a deeper vacuum, it may be convenient to disable the constant beeping alert from the pump 30 minutes after reaching 500 microns and keep the pump running at High Speed

**Solution:** After the alert starts to beep, the pump will slow down, you can turn off the pump by pressing the “Start Button”  then turn the pump back on. The alert will turn off and the pump will run at **High Speed**.

### DO NOT TURN OFF ROCKER POWER SWITCH.

\*\*\* **Note:** This can only be disabled or enabled once the pump starts beeping.

If you would like to **Disable the alert before running a vacuum on your system**, you will need to run the pump with valve caps on and tightened. After 30 minutes, the pump will beep, then you can disable it by pressing the “Start button”. **DO NOT TURN POWER ROCKER SWITCH OFF**. Turning the power off or unplugging it will reset the condition back to beep alert mode.
